DETAILED ACTION

1. The disclosure is objected to because of the following informalities: the status of applications cited in the Cross Reference should be updated. Appropriate correction is required.
2. Claim 11 is objected to because of the following informalities: on lines 3 and 6, "multiplier" should be --multiplexer--. Appropriate correction is required.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

4. Claims 1-5,9,10,14-22,25,26, and 29-48 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Smith, Jr. (3,482,085).

Smith Jr. discloses in figure 1 an adder for adding a first input (E), a second input (P), and a carry input (F) to produce an adder output (T) and a carry out (G). The adder also has a bypass input (K) for controlling the logic of the adder to hold the first input (at 15), the second input (at 18) and the carry input (at 23), and to generate an adder output and carry without computing as claimed (suppressing the arithmetic operations of the adder, see abstract and col.

5, lines 40-71). The element (S, see figure 2d) can be seen as a transmission gate or latch with (a) as a logical input, (b) as clock input, and (c) as an output.

5. Claims 6-8,11-13,23,24,27 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
